

How we can use ai efficiently

1) gamma-> it is for making ppt AI generated very easily just provide content and theme then we can get the detailed PPT here very easily . (we can download this into the PDF , PPT and PNG or any type of the format here). If something we have to delete then go to the view and just delete particular things easily there.) (after that go to the side master and then we can easily insert our logo and all) (so insert and delete can be having very easily there also).

2)grok -> deep search to make a detailed report.

3)want to make an PPT and Editing by Lesser AI code Editor so then →

4) to create mindmaps using the AI-> for that we can use napkin.ai that will transfer the text into the mindmap and then provides us easily there.

5)want to summarize long task into the summary then we can use this here →merlin.ai extension for summarizing any type of the text directly and gets the summarize data and for any language and for any types of the data like we have to take it for like the linkedin post , instagram post and many for so for that also we can use this very easily..

6)notbooklm.ai-> it is use for th analysing any type of books , documents and any type of pdf and all and then we can basically chat with that also basically to work and chatting like how it is working and all very easily with that.

(we can directly add the link into the notebook lm and then we can directly paste the video into the ppt , pdf and all and make everything very easily there also)

(so we can add docx, youtube video , pdf , text and any thin very easily)

(now basically we can add anything into that for the resource and then just ask lik what type and any kind of the question there).

(we can also create podcast with the details and all here with the details and all here very easily here.)

(means we have to just generate it and use it and listen it correctllyhere and just useit here very easily.)

7)How To Create posters/ creative content with ai using here -> for chat use the chat gpt and just make an prompt and then generate an image based on that just create an image using that text.

8) cluade.ai->now we have to just paste the image , file or any thing and then create the code here easily with any type of the work here very easily here ..)

9)julius.ai-> to provide the data and then we an get the detailed analysis of the report here very easily and then we can use any dataset and then just get the output that i actually want from that here very easily now.)

10)3d visualisation tolls for your datasets here →julius.ai

11) now not getting interview calls for the jobs you're having here ->create ATS Friendly resume here

—> now then you can directly get the shortlisted here very easily here..)

12)genspark super agent -> we can search for any kind of job and for any kind of location and all very easily here..)

→ we have to just pass the prompt and then we get all the details very easily here).
